

Friends with honey

## Citizen Science Workshop

### WHO WE ARE?

At Friends with honey, we want to capture the communities fascination and love for nature and equip them with the skills necessary to recognise and protect their local biodiversity.

All facilitators have a current WWC check.

### WHAT WE DO?

Learn the skills you need to become a citizen scientist and collect biodiversity records using a variety of methods.

Biodiversity refers to the variety of living species on Earth, including plants, animals, bacteria, and fungi. While Earth's biodiversity is so rich that many species have yet to be discovered, many species are being threatened with extinction due to human activities, putting the Earth's magnificent biodiversity at risk.

### WHAT'S THE BUZZ?

The climate is changing. The human population is increasing. It is more important than ever to take action. Citizen science is a very immediate way we can act for nature, combat climate change and species extinction.

In our workshop you will:

- Learn how to use the iNaturalist data collection app
- Develop an understanding of basic classifications of plants, animals, and fungi
- Hear about threats and opportunities in our beautiful bushland parks
- Connect with community groups to collaborate on data collection
- Start your journey as a Citizen Scientist by participating in a pollinator count in your local area

### PRICE?

This one and a half hour session, for up to 30 participants is \$375
