

Bee for Biodiversity Incursion for primary school students

WHO WE ARE?

At Friends with honey, we want to capture children's fascination and love for nature and equip them with the skills necessary to recognise and protect their local biodiversity.

All facilitators have a current WWC check.

WHAT WE DO?

By taking a closer look at the fascinating world of bees, children will be able to comprehend the importance of pollinators to the world around them.

Our incursions are interactive and we ask plenty of questions to spark conversations. We aim to inspire children to share the knowledge they have learned with their friends and family.

WHAT'S THE BUZZ?

Join us for an immersive exploration into the fascinating world of bees. During this incursion, we'll cover the following topics;

- Insect identification basics - what makes a bee a bee, and how do bees differ from other insects.
- Discover the differences between Native Bees and European Honey Bees.
- Uncover the critical role bees play in maintaining biodiversity.
- Delve into the ecological services that bees provide in our gardens and food production systems.
- Turn back the clock to discover how European honey bees came to Australia, and how they became a part of our landscape.
- Get an up-close look at a beehive (minus the bees) and learn about their life cycles and complex social structure.
- Acquire practical tips on designing bee-friendly gardens.
- Discover how bees make honey and try some delicious local varieties.

PRICE?

We will come to your school for a full day and run three sessions for up to **100** students from just **\$495**.
